

## Anoka Technical College Library Media Center CINAHL (Nursing) Database Tip Sheet

**Path to CINAHL:** From the college website, click on Current Students – Library and Research – library databases -- CINAHL.

### Composing a basic search

From the opening screen, enter your search terms in the white rectangle. Leave the Full Text box checked under the **Search Options** bar to return only results that have the entire article attached. Additional Search Options (“**limiters & expanders**”) are discussed on the following two pages.

EBSCOhost: Basic Search - Windows Internet Explorer provided by Anoka Technical College

### Viewing Your Search Results

The Results page lists the articles in relevancy ranked order. Here are some of the features:

- To quickly view an abstract, hover your mouse over the **Preview** icon .
- The **article title** will take you to the citation information and/or the full text.
- The **HTML Full Text** link takes you directly to the full text of the article.
- The **PDF Full Text** link takes you to a PDF version of the full text. Often the PDF version requires that you **download** the article in order to save or print the article. (The citation must be printed separately.)

**Refine your results (left) column** - You can narrow your search results by source type, subject, journal (publication), age, and gender, simply by using the left hand column. Tighten the date range by using the sliding bar and click **Update**. A revised Result List displays. You may refine your search further by clicking the **Show More** link under Refine your results. Results can be resorted by date using the sort field drop-down.

## Overview of *Show More* search options

### Limiters

Limiters are huge time-savers. You may restrict your search to a specific publication, age group, gender, clinical query, and publication type such as care plans, case studies, and clinical trials. The **Journal Subset** will limit to articles from allied health, nursing, public health, and United States journals. Use one type of journal subset at a time.

Placing a check-mark next to **Peer Reviewed** (right column of Search Options) will limit your search to articles that were reviewed by a board of peers.

The advanced search screen offers additional limits such as evidence-based practice, articles with images, and inpatient versus outpatient.

### Expanders

Less commonly needed is a technique to expand a search for more results. Some techniques to expand a search is to brainstorm for varied keywords and spellings, such as *post-operative* and *postoperative*; to “truncate” a term with the asterisk, which will allow for various spellings/forms of the word, such as *surg\** for surgical or surgery, or to search within the full-text of the articles themselves by checking the box next to “**Also search within the full-text of the articles**”.

Note that whenever you expand a search to look beyond subject headings, you are most likely decreasing the relevancy of the results.

To receive results that are not full-text, but most generally available through interlibrary loan, unclick the **Full Text** box on the right.

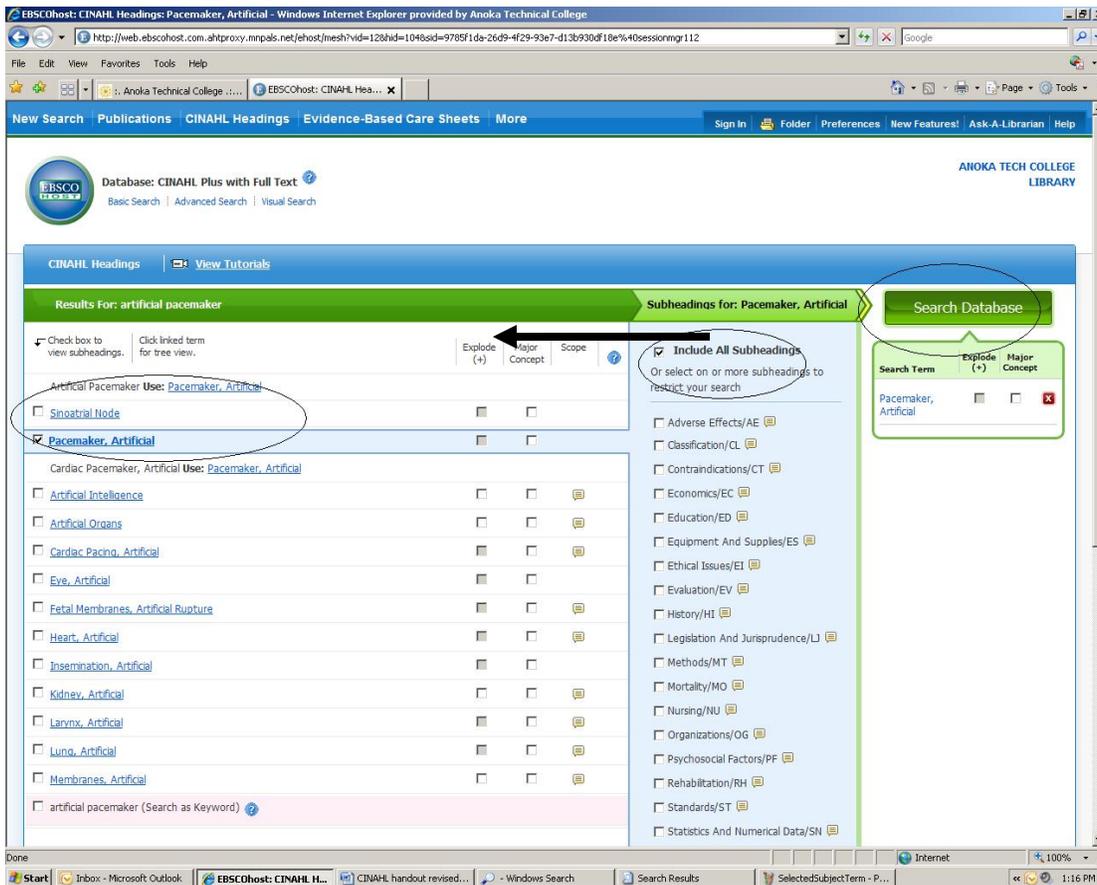

The screenshot shows the EBSCOhost search interface with the Search Options dialog box open. The dialog box is titled "Search Options" and has "Search" and "Reset" buttons. It contains several sections:

- Search modes:** Radio buttons for "Boolean/Phrase" (selected), "Find all my search terms", and "Find any of my search terms".
- Apply related words:** A checkbox that is unchecked.
- Also search within the full-text of the articles:** A checkbox that is checked and circled in red.
- Limit your results:**
  - References Available:** Unchecked checkbox.
  - Abstract Available:** Unchecked checkbox.
  - Published Date from:** Fields for Month and Year, with "to" and "from" labels.
  - Journal Subset:** A dropdown menu set to "All".
  - Clinical Queries:** A dropdown menu set to "All".
  - Image Quick View:** Unchecked checkbox.
- Full Text:** A checkbox that is checked and circled in red.
- Publication Year from:** Fields for Year and "to".
- Publication:** A text input field.
- Peer Reviewed:** Unchecked checkbox.
- Publication Type:** A dropdown menu set to "All".
- Gender:** A dropdown menu set to "All".
- Image Quick View Types:** Checkboxes for "Back and White", "Photograph", "Chart", "Color Photograph", "Diagram", "Graph", "Illustration", and "Map".

The background shows the EBSCOhost search results page for the query "pregnancy". The search results are displayed in a list format, with the first result being a journal article from the Nursing Standard (2009 Aug 13-18; 23 (49): 26-7).

## Medical subject headings

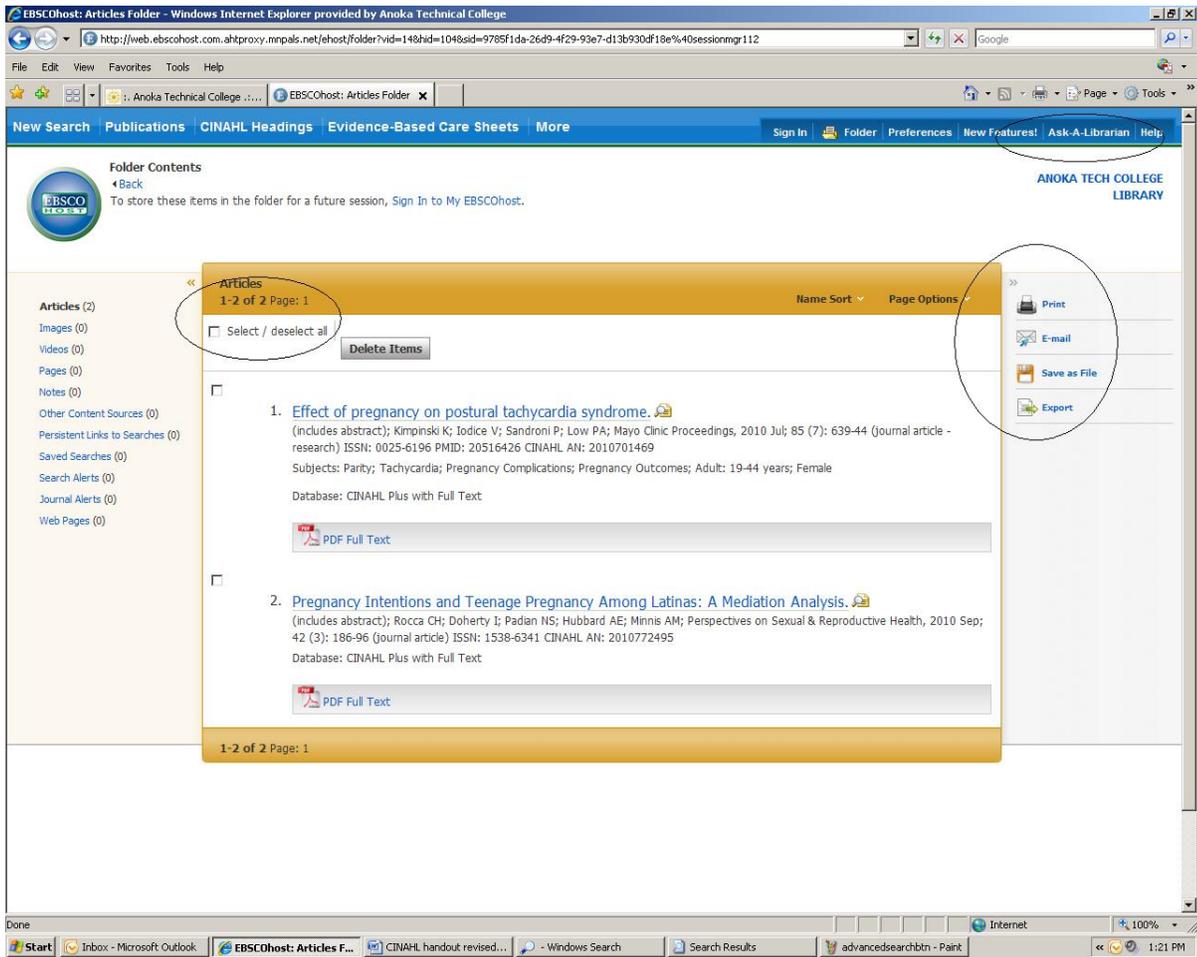

CINAHL headings provide more relevant search results than do keywords. Check the **Suggest Subject Terms** box to find the correct terminology for the database. You can browse alphabetically “Term Begins With,” or search within the index using “Term Contains,” or “Relevancy Ranked”. Search results for “*artificial pacemaker*” show that the terms are in reverse order: **Pacemaker, Artificial**.

You may choose to select just a few subheadings in the column to the right in order to tighten your search.

The **advanced search screen** allows you to combine terms with search rectangles, or search specific fields with drop-down arrows, such as Article Title (TI), Author (AU), Number of Pages (PG), Medline PMID (PM), and Journal Title (SO). To expand a search, choose All Text (TX). The tab to reach the advanced search screen is just beneath the search rectangle.

## Managing your search results by using the “folder” feature

- To pick and choose select articles, click the **Add to Folder** icon/link at the bottom of the citation. To view items in your Folder, click **Folder View**.
- In the folder view, click the **Print**, **E-mail**, or **Save** icon and follow the directions on screen to print/e-mail/save your results. You will also be able to choose your required **citation style**. **Note:** Items placed in the folder will be removed when you close your browser.
- Use the Ask-A-Librarian link in the upper right corner for search tips (allow several hours or a business day for an answer). Use interlibrary loan links to get copies of articles not included with the abstract.
- If you would like to save your search string and rerun it on a later date, click on Alert/Save/Share, add the search to your temporary folder, then select and email to yourself the search’s “persistent link”.
