2023–2024 Automotive Program MINIMUM Required Tool List

**FIRST YEAR**

All Anoka Technical College Automotive Students are required to provide their own Professional quality set of hand tools and have them available for lab use each day that you are at school. The list that follows contains the Minimum tool requirements to start the First Year of our program. When you are employed as a technician, it is impossible to know what vehicles you will be working on that day or what specific tools you will need. The same is also true while you attend school at ATC. We have taken a great deal of time to reduce the tools required in our program to the bare minimum, to reduce your initial expense. It is important to remember that Professional quality tools are an investment in yourself and your future career. To reduce your initial expense, we have separated the tool requirements into a First Year and an Optional set. These tools will eventually be required on the job as an automotive technician.

Our program schedules a formal Tool Day each year in July. Representatives from a variety of professional tool manufacturers will visit our classroom during the first week or so of classes. Although you are not obligated to purchase tools from these vendors, they can help with both tool selection and purchase options. The professional tool manufacturers do offer a discount of approximately 50% on the purchase of their tools through their respective Vocational Education programs. You will be eligible for this discount the entire time you are enrolled in our program. The Vocational Education pricing is ONLY available through this program and is not honored by the independent business owners driving the tool trucks that may stop at your place of employment.

You are responsible for the organization, care, storage, and security of your tools. You will be expected to provide tool storage. The school does not insure your tools. Most homeowner’s insurance policies will cover some tools although there is usually a limit to that coverage. Insurance in excess of that limit will typically require an additional low-cost rider. Contact your insurance company for specific details.

_SnA-onTool Set part #SEPPREMET and Matco ANOKASET are preapproved and have the required tools included. They are not identical and tool vendors may need to make substitutions based on availability._

- 3/8” Drive Socket Set w/ Ratchet & U-Joint- 6 pt. 8 to 19mm

2023 – 2023 Automotive Program Additional Tool List

All Anoka Technical College Automotive Students are required to provide their own Professional quality basic set of hand tools and have them available for lab use each day that you are at school. Professional quality tools are an investment in yourself and your career.

The list that follows contains the Minimum tools Required to start the Second Year of our program.

Our program schedules a formal Tool Day each year in July. Representatives from a variety of professional tool manufacturers will visit our classroom during the first week or so of classes. Although you are not obligated to purchase tools from these vendors, they can help with both tool selection and purchase options. The professional tool manufacturers do offer a discount of approximately 50% on the purchase of their tools through their respective Education programs. You will be eligible for this discount the entire time you are enrolled in our program. The Education pricing is ONLY available through this program and is not honored by the independent business owners driving the tool trucks that may stop at your place of employment.

You are responsible for the organization, care, storage, and security of your tools. You will be expected to provide secure tool storage. The school does not insure your tools. Most homeowner’s insurance policies will cover some tools although there is usually a limit to that coverage. Insurance more than that limit will typically require an additional low-cost rider. Contact your insurance company for specific details. Internship work sites or some part-time jobs you may elect to participate in while attending school may require that you have additional tools.

You are responsible for knowing what tools are required at your work site and transporting tools between school and work as required.

- General Brake Service Kit with Brake Shoe Spring Tool, Star Wheel Adjustment Tool, & Universal Brake Hold Down Spring Tool
- 25' Tape Measure

It is suggested that you purchase as many tools as you can afford while you are in school. The Vocational Education programs end when you are no longer attending school, as do the discounts. You will never be able to buy tools at the prices that are offered while you are enrolled at Anoka Tech. When or as you go to work in your automotive career, consult with other technicians that you work with to get an idea of what additional tools to consider purchasing as you start your career.
